

Select method

```
$query = $adapter->select();
```

from method

```
$query->from(  
    'table',  
    ['alias' => 'column'],  
    'schema'  
);
```

Group

```
$query->group('column');  
$query -> group([ 'column1', 'column2']);
```

Expressions

```
$query->from('table', new \Zend_Db_Expr('count(*)')); //This will make the query parser insert the  
expression as is, without any modifications.
```

join

```
$query->join(array('alias' => 'table'),  
            'alias.produ ct_id = other_ali as.p ro duc t_id',  
            array( 'alias _co lum n'= >'c olumn' ) );  
  
$query ->join Right( ); //Same parameters for all below  
$query -> joinLeft();  
$query -> joinFull();  
$query -> joinCross();  
$query ->join Natural(t able, [column s]); //dont need condition parameter (2nd parameter)
```
